Articlename: SYS998603200 AZURA UHPLC HPG System

High Pressure Gradient UHPLC 1000 bar System with 3D diode array detector 190-1000 nm System Proposal

Eluent delivery

The UHPLC **Pump P6.1L with a HPG configuration** features a solvent selection valve to set up to 4 solvents to the system of which two can be blended simultaneously at up to 1000 bar. The internal degassing unit will prevent air bubbles in the system. Every P 6.1L comes with an attached mixing chamber, which can be changed to a larger volume depending on the applications needs.

Sample Injection

The **Autosampler 6.1L** can inject 0.1 – 5000 µl to have a large flexibility. Using standard vials or two microtiter plates will give you a maximum sample capacity of up to 768 samples or 108 vials. The UHPLC version can be used up to 1240 bar system backpressure.

Column thermostating

The **Column thermostat CT 2.1** is suitable for column thermostating above and below room temperature. The instrument operates with a microprocessor controlled Peltier element for exact temperature settings.

Chromatography data system

KNAUER **ClarityChrom®** is a powerful, yet easy-to-use chromatography software for instrument control, data acquisition and data processing. It is an economical solution compared to other more complex chromatography software while still offering FDA 21 CFR Part 11 compliance.

Detection

The **diode array detector DAD 6.1L** covers all conceivable applications
